

Construction Cost Systems, Inc

- Firm Profile -

Construction Cost Systems Inc. is an independent cost and project management firm. We provide owners with predictive objective advice about a facility's cost from initial conception through design, construction and occupancy.

Since 1979, CCS has provided services on over 3,500 projects of all types and sizes with a combined estimated dollar value of over \$53 Billion.

CCS brings a diverse knowledge base to any project team. Our full time staff of cost and construction professionals has experience working on projects of all types and sizes and is comprised of certified cost engineers, certified professional estimators, architects and engineers, schedulers, value engineers, quantity surveyors, project managers and construction managers.

Fiscal control and scope management are two of the most important issues facing decision makers as they develop a capital project. With a broad foundation in cost management, CCS has the depth and knowledge to optimize these decisions for our clients.

CCS's team of experts can provide a diverse range of services including: feasibility studies, total project budget development, construction estimates at feasibility through design phases, peer review estimates, economic analysis, facility assessment, constructability analysis, design scope reviews, value management, schedule analysis, risk assessment, contract negotiations, pay request reviews, on site project management, change order and claims control.

Throughout the process we provide fiscal information that allows the team to move throughout the development process, confident of an on-budget delivery that is consistent with the overall project objectives.
